

Green Cluster Studies - Thames Gateway.

client

Greening the Gateway Kent & Medway

date

March 2008

The Green Cluster studies set out an ambitious, creative vision for the design of the Green Grid public realm across the north Kent part of the Thames Gateway.

Each of the eight Cluster Studies focuses on areas of intensive regeneration and change where high quality routes and greenspaces can be strategically sited to connect communities with their local countryside. The aim is to raise expectations, add value to existing investment and create high quality green infrastructure for future development.

Each of the Cluster Studies captures stakeholder aspirations and promotes a common vision, accompanied by an Action Plan for its delivery. Visions for each Cluster were developed through stakeholder workshops, sketches and presentations, designed to explore key issues and ideas. The results are published in a set of brochures, technical reports which set the agenda for change.
